

DESIGNED FOR

StorageQuest Reflector®

Network Backup & Archiving Software

High Speed – High Volume Data Archiving Software

StorageQuest Reflector® software is the premier data archiving system for moving data to DVD and Blu-ray disc. Reflector helps you target the data you want to archive, organizes and indexes the content, and migrates it to permanent storage at speeds up to 30 GB per hour. You can record your discs and print unique labels, with robotic disc publishers powered by Rimage.

Retrieve Your Data Anytime, Anywhere

Reflector uses the industry-standard UDF file system, supported by nearly all computers and operating systems. The files you store are organized and indexed so that you can retrieve your data from any computer, just by putting the disc in your DVD drive and copying over the files. You don't need any special software to retrieve your data.

Reflector Automates the Burning Process

Reflector will automatically span your data across as many discs as you need, so whether you are writing a single disc, or spanning 500 GB over 10 Blu-ray discs, Reflector makes the process painless. The Backup Wizard allows you to schedule recurring jobs. Our scripting engine allows for you to make customizable jobs and integrate with other backup programs, and our Job Folder Archiver lets you drag-and-drop folders over the network to create instant backups.

Move Stale Data off your Servers

Documents and old project files from years ago do not belong on high-performance servers if the files are not likely to be used again. Reflector first helps you target the files you want to migrate. Then it records, labels, and indexes your content, quickly and accurately. With your old data files permanently stored on optical discs, your high-performance servers will be free to handle your most active data.

Backup Features and Benefits

- **Full and incremental backup** modes allow you to backup all files or only recently modified files.
- **Automatic file splitting** ensures files larger than a disc can be recorded and restored.
- **Open file backup** allows the recording of in-use files like databases and email inboxes.
- **File filtering options** help you target the files you want.
- **Windows registry backup** for full workstation backup capabilities.
- **Server-to-server file migration** mode allows you to copy or move data from one server to another.
- **HTML index file** placed on every disc contains an index of your disc set— allowing you to find and use your files quickly.

Archiving Features and Benefits

- **A wide range of supported media types** allow you to scale from a 650 MB CD-R to a 50 GB Blu-ray Disc as your needs change.
- **Network support** – pull data from any server on your network.
- **Long term preservation of records** is easily achieved with archival -grade media, allowing your data to survive for decades.
- **Automatic disc spanning** - Reflector will automatically span your data over as many discs as are needed.
- **Industry-standard discs** written with the UDF file system ensure your data will be in a readable format far into the future.
- **Data verification** allows you to re-certify the files on your discs at any time against the original contents.

Restore Your Data Anywhere!

Network Restore allows your data to be restored over the network, back to its original location.

Full Mac and Linux support ensures your files can be accessed in the DVD drive of virtually all computers and operating systems.

No client software is needed to restore your data. Your data is instantly accessible on the disc.

History Search – Reflector maintains records of all files and folders that were recorded, and provides a search engine for locating archived files.

Fully Automated Solution

Scripting Engine allows backup and archiving scripts to access all the features of Reflector.

Scheduled Backup capabilities allow jobs to be run on a regular schedule without user intervention.

Job Folder Archiver allows you to use Reflector in a fully-automated “Hot Folder” mode, where jobs are triggered by copying files into a special folder.

Label Printing

Full color labels can be printed automatically on your discs with inkjet or thermal transfer. Add your own images and text.

Dynamic label content can be added to your discs, printing identifying information on each disc. Dynamic fields include:

- Volume name
- Date and time
- Description
- User name
- Computer name
- Disc number of set
- Total discs in set
- Number of copies made
- Size of disc contents
- Custom fields, barcodes, and images
- Number of files and folders
- First file name on the disc
- Last file name on the disc

Automatically Prints Full Color Labels

Reflector for Rimage™ Disc Publishers

StorageQuest Reflector records discs using robotic disc publishers from leading manufacturers like Rimage™.

Rimage Producer III disc publisher records and prints labels on CD, DVD and Blu-ray Disc.

These systems combine one or more DVD recorders, a label printer, and stacks of blank media to provide a fully automated disc publishing system.

Writing large quantities of data with Reflector to your Rimage system is easy—setup typically takes less than one minute. With a steady supply of blank media, the Rimage system will record discs from many different Reflector clients over the network, making publishing discs from any Windows or Mac workstation a snap.

Archiving with Optical Media

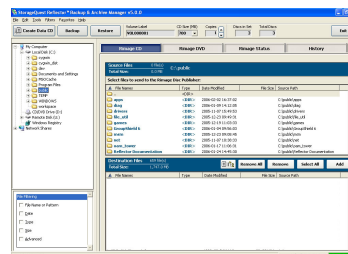

Optical media is ideally suited for archiving long-term data. It's durable, permanent, and widely used. Unlike tape or hard disk, it can not be accidentally erased. It provides a tamper-proof record that helps you meet compliance regulations like Sarbanes-Oxley. And it's portable, facilitating off-site backup. But most importantly, it's industry standard — you can put a Reflector DVD in virtually any computer and read back the data.

Optical media is here to stay, in its current form of CD, DVD and Blu-ray, and future formats which promise to be backwards-compatible. When the future arrives, your data will be there!

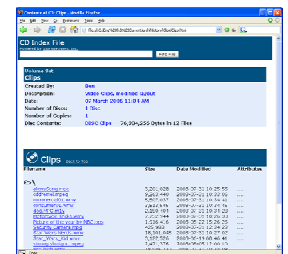

Need More Information?

StorageQuest Reflector has helped meet the backup and archiving needs of businesses and government agencies of all sizes.
